

Table of contents

Chapter 1		
Partial tooth preparation	1	
U. Campaner		
General criteria for the functional and aesthetic recovery of a damaged tooth.....	3	
Partial tooth preparations	4	
Conclusions	12	
Cavity preparation for indirect restorations.....	13	
Partial restorations on anterior teeth.....	23	
Preparations	27	
Classic veneers	28	
No-Prep: no preparation.....	28	
EndoCrown	30	
Recommended reading.....	32	
Chapter 2		
Complete crown preparations	35	
U. Campaner • E. Manca		
Complete crown preparations	36	
Decision-making process	36	
Preparation of dental elements.....	38	
Parameters for an optimal and long-lasting duration of the prosthetic restoration	47	
Types of preparation	50	
Preparations with a simple or horizontal line	51	
Chamfer.....	54	
Preparation with a compound line	57	
Vertical preparations	59	
Recommended reading.....	64	
Chapter 3		
Materials for indirect restorations	65	
G. Derchi • V. Marchio		
Composite materials	65	
The beginnings	65	
The revolution.....	67	
Concept of adhesion	70	
Evolution of composite materials.....	71	
Classification of composites based on filler size.....	74	
Polymerization	82	
Composite materials for the lab	85	
Ceramics in dentistry	87	
Properties of ceramics	88	
Strengthening systems for ceramics	92	
Classification of ceramics	97	
Structure and production of ceramics	102	
Recommended reading.....	109	

Chapter 4**Principles of adhesion**113

G. Derchi

Types of adhesive113

Etch-and-Rinse system114

Self-Etch system116

Recommended reading119

Chapter 5**Substrates**121

G. Derchi

Tooth substrate122

Enamel122

Dentin123

Adhesion protocol128

Substrate of prosthetic restoration129

Composite substrate132

Recommended reading136

Chapter 6**Cementation: materials and clinical phases**137

G. Derchi

Properties of cements137

Conventional cements139

Zinc oxyphosphate
and polycarboxylate cements139

Zinc oxide and eugenol cements141

Glass ionomer cements141

Resin cements144

Auto-polymerizing or self-curing cements145

Photo-polymerizing or light-curing cements145

Dual cements145

Hybrid glass ionomer cements146

Factors that affect the degree
of cement conversion147

Cement composition147

Interaction between cement and adhesion system147

Restoration characteristics149

Type of blue light lamp150

Conclusions151

Type of cement152

Material of the restoration153

Post-cementation phases156

Recommended reading156

Emblematic clinical cases157

R. Ammannato • N. Ragazzini • R. Aiuto

G. Fumei • L. Lardani • P. Usai

Clinical case 1159

Clinical case 2161

Clinical case 3165

Clinical case 4170

Clinical case 5174
